

## **PLOTBASE 3.7.4 / 3.8**

NEW Version - Developed & Supported by RATIO

*Upgrade your Ricoh PLOTBASE software to the latest 3.7.4 version*

Full Windows 7 Support\*

Updated Adobe PDF version (PDF 1.7 level)

Updated CAD and Windows application drivers

Available for all Ricoh Wide Format Copiers (or OEM equivalent)

RW-470, RW-240, RW-480, RW-3600/2400, RW-5100/7140\*

### Benefits

- PLOTBASE 3.7.4 or 3.8 Installs on Windows 7 PRO x32
- Provides the capability to install the PLOTBASE controller card on Windows 7 PRO x32 PC\* for faster performance on a clean operating system
- Compatibility with XP-PRO & Windows 7 + Windows 8 + Windows 10 workstations / networked client PCs
- Fast batch plotting & updated compatibility with recent Adobe PDF versions. (The 3.8 version adds additional processing speed for PDF files and more recent PDF level support).
- Windows driver & CAD application compatibility updates provide output control for your plotting from the latest versions
- Keeps your wide format copier software compatible with the latest Windows versions / updates as well as files received from others

\* PLOTBASE 3.7.4 or 3.8 should be installed on Windows 7 Professional x32 Operating system Computer. ('Home' versions are not supported)

\* x64 connected client workstation drivers & PCWIN batch plotting application are supplied for compatibility with users that are running 64bit applications on their workstation / client PCs

\* SCANTOOL file format compatibility with updated file compatibility is also included (if SCAN option is already optioned to the controller card)

\* Earlier generation controller cards may require a single core era computer. Earlier generation D-1, D-2, D-3, D4 controller cards may not be compatible with the latest computer chip sets which could result in installation issues, scanning aberrations or other issues. \*We suggest leaving the RW-470, RW-240, RW-3600 or RW- 480 controller card on the computer that it is currently installed on, reformat that PC to W7-PROx32 and then upgrading the PLOTBASE version to 3.7.4 for compatibility with W7 or W8 or W10 x32 & x64 workstations. If migrating your PLOTBASE Server software & controller card to a new dual core PC is necessary, we do offer a single to dual core compatible controller swap or dual core PCs which are tested OK for single core cards. In any case, please check with us before purchasing a new PC for use as the PLOTBASE server. Re-certified Dell single or dual core computers are available from RATIO with PLOTBASE & SCANTOOL & PLOTCLIENT pre-installed at a modest cost.
